

Thank you for purchasing the 1¼ inch Tefba coolant filter from FasterJags™ for your XJS. We feel that it is the finest product of its kind available anywhere. Installation is very simple, as illustrated in the photos below.

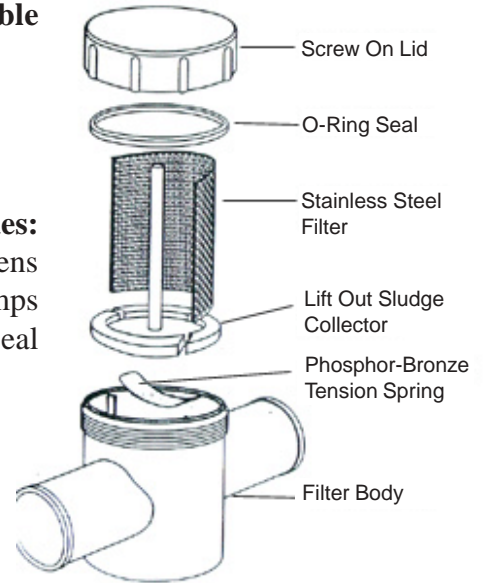

Along a straight section of the top radiator hose, mark 2" (5cm) ready for cutting.

Place in correct direction (stamped IN and OUT) and slide the unit in place.

Any particles larger than the holes in the stainless steel mesh will be caught.

Kit also includes:
2 grades of Filter screens
2 Quality hose clamps
1 spare O-Ring seal

It's the simplest and quickest filter to clean with absolutely no tools required.

When first fitted, check regularly for debris until minimal amounts are trapped.

If you have any questions regarding Tefba filters or any other XJS related product, please email brian@fasterjags.com or call Brian Welker at 214-769-4555.
